

## What does it mean to be green?

Green design and construction include practices that significantly reduce or eliminate the negative impact of building on the environment and occupants in five broad areas:

- Sustainable site planning
- Safeguarding water and water efficiency
- Energy efficiency and renewable energy
- Conservation of materials and resources
- Indoor environmental quality

Not only are green buildings environmentally friendly now, but they will have minimal impact on the environment in the future.

## How does being green work with the Sustainable Long Island's three E's?

### Economic Development

- Promotes use of local businesses for supplies
- Increases building value and return on investment

### Environmental Health

- Reduces the impact of natural resource consumption

### Social Equity

- Green buildings have better air quality and can help reduce rates of asthma for higher risk populations

## Mission in Practice:

Creating a Work Place That Supports  
Our Downtowns and Environment

Welcome To Our New Home

**rethink. rebuild. renew.**

# Welcome to the new home of Sustainable Long Island!

Sustainable Long Island is the organization working with communities across Long Island to revitalize downtowns, clean up polluted properties, and increase civic participation through community involvement. Sustainable Long Island promotes economic development, environmental health, and social equity for all Long Islanders.

Keeping those principles in mind, Sustainable Long Island moved to 45A Seaman Avenue in Bethpage, located within walking distance to Bethpage's main street and Long Island Rail Road Train Station.

Our new office space, designed by TPG Architecture, takes advantage of sustainable or "green" design. The floor, ceiling, and walls are covered by recycled and eco-friendly products providing a healthier working environment for Sustainable Long Island employees while improving the environment.

Sustainable Long Island thanks Russell Albanese for his expertise in assisting Sustainable Long Island with our move.
